"Every form of addiction is bad, no matter whether the narcotic be alcohol or morphine or idealism." — Carl Jung

Teenage addiction in India is escalating at an alarming rate. A 2025 study indicates that 33.8% of adolescents are substance users, with 29.7% smoking and 28.9% consuming alcohol.

Approximately, 100 million people are affected by various narcotics in India.

The rise in substance abuse among youth is often linked to peer pressure, stress, and lack of awareness. .

Experts emphasize that prevention through education, early intervention, and community engagement is crucial to curbing this growing crisis.

The future of education is going to be super exciting with Artificial Intelligence! AI can make learning so much easier, like helping us with instant notes, clearing doubts in seconds, and even checking our work faster. It can suggest smarter ways to study too. But honestly, no matter how advanced AI becomes, nothing can replace our teachers.

Their motivation, care, and guidance are what truly help us learn. I feel the future of education is not about replacing teachers with machines, but about using technology to make learning better for everyone.
